Ergonomic Risk Assessments

Poorly set-up workstations, awkward postures, repetitive tasks and heavy lifting cause musculoskeletal injuries, fatigue and lost productivity. An ergonomic assessment identifies these risk factors, which may be physical, cognitive or organisational, and shows how to correct them. Strat Environment has been helping South African workplaces stay safe and compliant since 2017. You receive your full report within 14 days of the site visit.

Helping South African workplaces since 2017

Who needs it

The Ergonomics Regulations, 2019, published on 6 December 2019 under section 43 of the OHS Act, require employers to have a competent person carry out ergonomic risk assessments of all jobs that may pose an ergonomic risk, and to train employees.

What Strat Environment does

Our specialists observe tasks and workstations, assess postures, force, repetition and layout, and rank the risks.

What you receive

- An ergonomic risk assessment report
- A prioritised list of risks
- Practical recommendations on workstation adjustment, equipment, task design and training
