Hazardous Biological Agents Risk Assessments

Bacteria, viruses, fungi and their toxins cannot be seen, and they can multiply quickly. Workers can be exposed through contact, droplets, the air, vectors, blood and body fluids, and waste. In offices, damp areas, carpets and ventilation systems can also harbour microorganisms. Strat Environment has been helping South African workplaces stay safe and compliant since 2017. You receive your full report within 14 days of the site visit.

Helping South African workplaces since 2017

Who needs it

Under the Regulations for Hazardous Biological Agents, 2022, made under the OHS Act, employers whose employees may be exposed must assess the risk and put controls in place. The workers most at risk are in healthcare, laboratories, food production, farming and municipal refuse and sewage services.

What you receive

- An HBA risk assessment report
- Sampling results
- Recommendations on controls, hygiene and PPE
