Occupational Hygiene · Since 2017

Hazardous Chemical Substances Risk Assessments and Air Monitoring

Dusts, fumes, gases, mists and vapours from cleaning agents, paints, solvents, pesticides and fuels are present in most workplaces. Exposure can happen through inhalation, ingestion or the skin, and it can cause anything from irritation and burns to cancer many years later. Strat Environment has been helping South African workplaces stay safe and compliant since 2017. You receive your full report within 14 days of the site visit.

Helping South African workplaces since 2017

What Strat Environment does

We identify the chemicals on your site, group employees into similar exposure groups, and carry out personal and static air sampling using recognised methods.

What you receive

- A hazardous chemical agents health risk assessment
- Personal exposure monitoring results compared with the occupational exposure limits (OELs)
- Recommendations on respirator zones and demarcation
- Specific control recommendations wherever limits are exceeded
- A confidential report that is ready for an inspection
