Occupational Hygiene · Since 2017

Hand-Arm and Whole-Body Vibration Assessments

Operators of hand-held vibrating tools are at risk of Hand-Arm Vibration Syndrome (HAVS). Symptoms include white finger, tingling, loss of grip strength and carpal tunnel syndrome. Drivers of mobile machines on rough ground are exposed to whole-body vibration, which is linked to back and musculoskeletal disorders. Strat Environment has been helping South African workplaces stay safe and compliant since 2017. You receive your full report within 14 days of the site visit.

Helping South African workplaces since 2017

Full report within 14 days of the site visit

Who needs it

Mines, construction, quarrying, agriculture and manufacturing are most affected.

What you receive

- A vibration assessment report
- Exposure results for each tool or vehicle
- Recommendations on tool selection, maintenance, seating and exposure-time limits
